

Intune Map Drives Solution – AAD sync method

1. AAD Connect syncs AD groups which contain Description attribute to show:
 - **MapDrives | K | \\fileserver1 | Reports**
2. Remediation script runs on Intune device which checks AAD Group user is part of.
3. Tattoos all the discovered AAD Groups Description attributes into the device registry.
4. When scheduled task runs, it will check for local domain or VPN connectivity (exits script and tries later).
5. On successful connectivity, script will map the drives according to the tattooed registry values.

Intune Map Drives Solution – toast notification

Displays how many drives were mapped successfully, else failed.

Displays all successful mapped drives.
